Sypher and Unity Solutions organizes a webinar dedicated to NIS2 compliance, with direct focus on cybersecurity

Bucharest, April 2026 – **Sypher**, the manufacturer of the data protection and cybersecurity governance platform together with the **Unity Solutions team**, a provider of IT, **cybersecurity and compliance services and solutions**, announces the organization of an **online webinar dedicated to organizations that need to align with the new European requirements on cybersecurity**, with a focus on the **NIS2** Directive, security best practices and their correlation with **GDPR requirements**.

The event is aimed **at managers, IT managers, security specialists, DPOs, business leaders and decision makers**, who need a clear and applied understanding of the impact of new regulations on their organizations.

During the webinar, the following will be addressed:

- the new obligations introduced by the **NIS2** Directive and their implications for companies in Romania;
- the relationship between cybersecurity and **personal data protection (GDPR) requirements**;
- risks, responsibilities and best practices for information security management.
- practical steps to assess the level of compliance and reduce operational and legal risks, by practically highlighting the use of the Cyfun framework proposed by the local cybersecurity authority DNSC for the assessment in the NIS2 area

The webinar will take place online, and participation is **free**, based on prior registration.

👉 Registration is done here:

https://eu01web.zoom.us/webinar/register/5217482638930/WN_ma2XcirGThGTG3osa1azog

"Through this webinar we aim to provide organizations not only with a theoretical perspective on NIS2 and GDPR, but above all a practical understanding of how these requirements can be integrated into existing processes, in order to increase the level of security and operational resilience," said Unity Solutions representatives.

About Sypher

Sypher is a European company that develops a software platform dedicated to information security and data protection management, helping organizations document, manage and demonstrate compliance with requirements such as GDPR through a structured, collaborative and auditable approach.
